Chapter 7:
Small Group Communication

Understanding Small Groups

Most of the communication skills discussed in this class are directed toward dyadic communication, which is applied in two-person interactions. While many of these skills can be transferred to and used in small group contexts, the more complex nature of group interaction necessitates some adaptation and some additional skills. *Small group communication* refers to interactions among three or more people connected through a common purpose, mutual influence, and a shared identity. In this section, you will learn about small group characteristics, functions, and types.

Characteristics of Small Groups

Different groups have different characteristics, serve different purposes, and can lead to positive, neutral, or negative experiences. While our interpersonal relationships primarily focus on relationship building, small groups usually focus on some sort of task completion or goal accomplishment. A college learning community focused on math and science, a campaign team for a state senator, and a group of local organic farmers are examples of small groups that would all have different sizes, structures, identities, and interaction patterns.

Size of Small Groups

There is no set number of members for the ideal small group. A small group requires a minimum of three people (because two people would be a pair or dyad), but the upper range of group size is contingent on the purpose of the group. When groups grow beyond fifteen to twenty members, it becomes difficult to consider them a small group based on the previous definition. An analysis of the number of unique connections between members of small groups shows that they are deceptively complex. For example, within a six-person group, there are fifteen separate potential dyadic connections, and a twelve-person group would have sixty-six potential dyadic connections.

As you can see, when we double the number of group members, we more than double the number of connections, which shows that network connection points in small groups grow exponentially as membership

increases. So, while there is no set upper limit on the number of group members, it makes sense that the number of group members should be limited to those necessary to accomplish the goal or serve the purpose of the group. Small groups with too many members increase the potential for group members to feel overwhelmed or disconnected.

Structure of Small Groups

Internal and external influences affect a group's structure. Regarding internal influences, member characteristics play a role in initial group formation. For instance, a person who is well informed about the group's task and/or highly motivated as a group member may emerge as a leader and set into motion internal decision-making processes, such as recruiting new members or assigning group roles, that affect the structure of a group. Different members will also gravitate toward different roles within the group and will advocate for certain procedures and courses of action over others. External factors such as group size, task, and resources also affect group structure. Some groups will have more control over these external factors through decision making than others. For example, a commission that is put together by a legislative body to look into ethical violations in athletic organizations will likely have less control over its external factors than a self-created weekly book club.

Group structure is also formed through formal and informal network connections. In terms of formal networks, groups may have clearly defined roles and responsibilities or a hierarchy that shows how members are connected. The group itself may also be a part of an organizational hierarchy that networks the group into a larger organizational structure. This type of formal network is especially important in groups that have to report to external stakeholders. These external stakeholders may influence the group's formal network, leaving the group little or no control over its structure.

Conversely, groups have more control over their informal networks, which are connections among individuals within the group and among group members and people outside of the group that aren't official. For example, a group member's friend or relative may be able to secure a space to hold a fundraiser at a discounted rate, which helps the group achieve its task. Both types of networks are important because they may help facilitate information

exchange within a group and extend a group's reach in order to access other resources.

Size and structure also affect communication within a group (Ellis & Fisher, 1994). In terms of size, the more people in a group, the more issues with scheduling and coordination of communication. Remember that time is an important resource in most group interactions and a resource that is usually strained. Structure can increase or decrease the flow of communication. Reachability refers to how one member is or isn't connected to other group members. For example, the "Circle" group structure in Figure 1: "Small Group Structures" shows that each group member is connected to two other members. This can make coordination easy when only one or two people need to be brought in for a decision. In this case, Erik and Callie are very reachable by Winston, who could easily coordinate with them. However, if Winston needed to coordinate with Bill or Stephanie, he would have to wait on Erik or Callie to reach that person, which could create delays. The circle can be a good structure for groups who are passing along a task, and each member is expected to progressively build on the others' work. A group of scholars coauthoring a research paper may work in such a manner, with each person adding to the paper and then passing it on to the next person in the circle. In this case, they can ask the previous person questions and write with the next person's area of expertise in mind. The "Wheel" group structure shows an alternative organization pattern. In this structure, Tara is very reachable by all group members. This can be a useful structure when Tara is the person with the most expertise in the task or the leader who needs to review and approve work at each step before it is passed along to other group members. But Phillip and Shadow, for example, wouldn't likely work together without Tara being involved

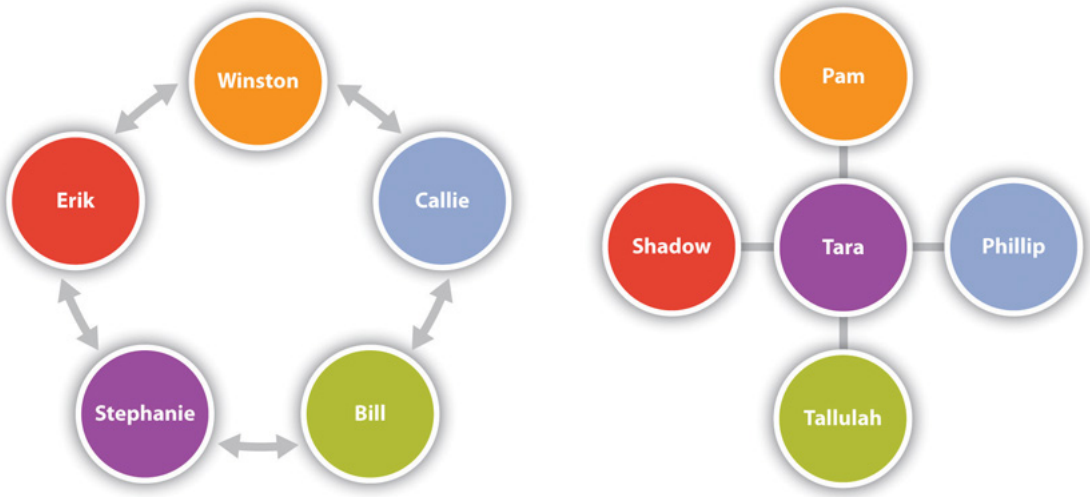

Figure 1: Small Group Structures

Looking at the group structures, we can make some assumptions about the communication that takes place in them. The wheel is an example of a centralized structure, while the circle is decentralized. Research has shown that centralized groups are better than decentralized groups in speed and efficiency. But decentralized groups are more effective at solving complex problems. In centralized groups like the wheel, the person with the most connections, person C, is also more likely to be the leader of the group or at least have more status among group members, largely because that person has a broad perspective of what's going on in the group. The most central person can also act as a gatekeeper. Since this person has access to the most information, which is usually a sign of leadership or status, he or she could consciously decide to limit the flow of information. But in complex tasks, that person could become overwhelmed by the burden of processing and sharing information with all the other group members. The circle structure is more likely to emerge in groups where collaboration is the goal and a specific task and course of action isn't required under time constraints. While the person who initiated the group or has the most expertise in regards to the task may emerge as a leader in a decentralized group, the equal access to information lessens the hierarchy and potential for gatekeeping that is present in the more centralized groups.

Interdependence

Small groups exhibit interdependence, meaning they share a common purpose and a common fate. If the actions of one or two group members lead to a group deviating from or not achieving its purpose, then all group members are affected. Conversely, if the actions of only a few group members lead to success, then all members of the group benefit. This is a major contributor to many college students' dislike of group assignments, because they feel a loss of control and independence when they complete an assignment alone. This concern is valid in that their grades might suffer because of the negative actions of someone else or their hard work may benefit the group member who just skated by. Group meeting attendance is a clear example of the interdependent nature of group interaction. Many of us have arrived at a group meeting only to find half of the members present. Sometimes, the group members who show up have to leave and reschedule because they can't accomplish their task without the other members present. Group members who attend meetings but withdraw or don't participate can derail group progress. Although it can be frustrating to have your job, grade, or reputation partially dependent on the actions of others, the interdependent nature of groups can also lead to higher-quality performance and output, especially when group members are accountable for their actions.

Shared Identity

The shared identity of a group manifests in several ways. Groups may have official charters or mission and vision statements that lay out the identity of a group. For example, the Girl Scout mission states that "Girl Scouting builds girls of courage, confidence, and character, who make the world a better place." The mission of this large organization influences the identities of the thousands of small groups called troops. Group identity is often formed around a shared goal and/or previous accomplishments, which adds dynamism to the group as it looks toward the future and back on the past to inform its present. Shared identity can also be exhibited through group names, slogans, songs, handshakes, clothing, or other symbols. At a family reunion, for example, matching t-shirts specially made for the occasion, dishes made from recipes passed down from generation to generation, and

shared stories of family members that have passed away help establish a shared identity and social reality.

A key element of forming a shared identity within a group is the establishment of the in-group instead of the out-group. The degree to which members share in the in-group identity varies from person to person and group to group. Even within a family, some members may not attend a reunion or get as excited about the matching t-shirts as others. Shared identity also emerges as groups become cohesive, meaning they identify with and like the group's task and other group members. The presence of cohesion and a shared identity leads to building trust, which can also positively influence productivity and members' satisfaction.

Functions of Small Groups

Why do we join groups? Even with the challenges of group membership that we have all faced, we still seek out and desire to be a part of numerous groups. Sometimes, we join a group because we need a service or access to information. We may also be drawn to a group because we admire the group or its members. Whether conscious of it or not, our identities and self-concepts are built on the groups we identify with. So, to answer the earlier question, we join groups because they function to help us meet instrumental, interpersonal, and identity needs.

Groups Meet Instrumental Needs

Groups have long served the *instrumental needs* of humans, helping with the most basic elements of survival since ancient humans first evolved. Groups helped humans survive by providing security and protection through increased numbers and access to resources. Today, groups are rarely such a matter of life and death, but they still serve important instrumental functions. Labor unions, for example, pool efforts and resources to attain material security through pay increases and health benefits for their members, which protects them by providing a stable and dependable livelihood. Individual group members must also work to secure the instrumental needs of the group, creating a reciprocal relationship. Members of labor unions pay dues that help support the group's efforts. Some groups also meet our informational needs. Although they may not provide material resources, they

enrich our knowledge or provide the information we can use to meet our instrumental needs. Many groups provide referrals to resources or offer advice. For example, several consumer protection and advocacy groups have been formed to offer referrals for people who have been victims of fraudulent business practices. Whether a group forms to provide services to members that they couldn't get otherwise, advocate for changes that will affect members' lives, or provide information, many groups meet some type of instrumental need.

Groups Meet Interpersonal Needs

Group membership meets *interpersonal needs* by giving us access to inclusion, control, and support. Regarding inclusion, people have a fundamental drive to be a part of a group and create and maintain social bonds. We've learned that humans have always lived and worked in small groups. Family and friendship groups, shared-interest groups, and activity groups all give us a sense of belonging and inclusion in an in-group. People also join groups because they want to have some control over a decision-making process or to influence the outcome of a group. Being a part of a group allows people to share opinions and influence others. Conversely, some people join a group to be controlled because they don't want to be the sole decision-maker or leader and instead want to be given a role to follow.

Just as we enter into interpersonal relationships because we like someone, we are drawn toward a group when we are attracted to it and/or its members. Groups also provide support for others in ways that supplement the support we get from significant others in interpersonal relationships. Some groups, like therapy groups for survivors of sexual assault or support groups for people with cancer, exist primarily to provide emotional support. While these groups may also meet instrumental needs through connections and referrals to resources, they fulfill the interpersonal need for belonging, a central human need.

Groups Meet Identity Needs

Our affiliations are building blocks for our *identities* because group membership allows us to use reference groups for social comparison—in short, identifying us with some groups and characteristics and separating us

from others. Some people join groups to be affiliated with people who share similar or desirable characteristics in terms of beliefs, attitudes, values, or cultural identities. For example, people may join the National Organization for Women because they want to affiliate with others who support women's rights or a local chapter of the National Association for the Advancement of Colored People (NAACP) because they want to affiliate with African Americans, people concerned with civil rights, or a combination of the two. Group memberships vary in how much they affect our identity, as some are more prominent than others at various times in our lives. While religious groups are too large to be considered small groups, the work that people do as a part of a religious community—as a lay leader, deacon, prayer group member, or committee—may have deep ties to a person's identity.

The prestige of a group can initially attract us because we want that group's identity to "rub off" on our own identity. Likewise, the achievements we make as a group member can enhance our self-esteem, add to our reputation, and allow us to create or project certain identity characteristics to engage in impression management. For example, a person may take numerous tests to become a part of Mensa, an organization for people with high IQs, for no material gain but for the recognition or sense of achievement that the affiliation may bring. Likewise, people may join sports teams, professional organizations, and honor societies for a sense of achievement and affiliation. Such groups allow us opportunities to better ourselves by encouraging further development of skills or knowledge. For example, a person who used to play the oboe in high school may join the community band to continue to improve his or her ability.

Group Formation

Small groups have to start somewhere. Even established groups go through changes as members come and go, as tasks are started and completed, and as relationships change. In this section, you will learn about the stages of group development: forming, storming, norming, performing, and adjourning. As with most models of communication phenomena, although we order the stages and discuss them separately, they are not always experienced in a linear fashion. Additionally, some groups don't experience all five stages, may experience stages multiple times, or may experience more than one stage at a time.

Figure 1. Stages of group formation

Forming

During the forming stage, group members begin to reduce uncertainty associated with new relationships and/or new tasks through initial interactions that lay the foundation for later group dynamics. Groups return to the forming stage as group members come and go over the life span of a group. Although there may not be as much uncertainty when one or two new people join a group as there is when a group first forms, groups spend some time in the forming stage every time group membership changes.

Given that interpersonal bonds are likely not yet formed and people are unfamiliar with the purpose of the group or task at hand, there are high levels of uncertainty. Early stages of role negotiation begin and members begin to determine goals for the group and establish rules and norms. Group cohesion also begins to form during this stage. Group cohesion refers to members' commitment to the purpose of the group and the degree of attraction among individuals within the group. The cohesion that begins in this stage sets the group on a trajectory influenced by group members' feelings about one another and their purpose or task. Groups with voluntary membership may

exhibit high optimism about what the group can accomplish. Although the optimism can be motivating, unrealistic expectations can lead to disappointment, making it essential for group members to balance optimism with realism. Groups with assigned or mandatory membership may include members that carry some degree of resentment toward the group itself or the goals of the group. These members can start the group off on a negative trajectory that will lessen or make difficult group cohesiveness. Groups can still be successful if these members are balanced out by others who are more committed to and positive in regards to the purpose of the group.

Many factors influence how the forming stage of group development plays out. The personalities of the individuals in the group, the skills that members bring, the resources available to the group, the group's size, and the group's charge all contribute to the creation of the early tone of and climate within a group. For example, more dominant personalities may take early leadership roles in the group that can affect subsequent decisions. Group members' diverse skill sets and access to resources can also influence the early stages of role differentiation. In terms of size, the bonding that begins in the forming stage becomes difficult when the number of people within the group prevents every person from having a one-on-one connection with every other member of the group. Also, in larger groups, more dominant members tend to assert themselves as leaders and build smaller coalitions within the group, which can start the group on a trajectory toward more conflict during the upcoming storming stage.

When a group receives an external charge, meaning that the goal or purpose of the group is decided by people outside the group, there may be less uncertainty related to the task dimensions of the group. Additionally, decisions about what roles people will play including group leaders and other decisions about the workings of the group may come from the outside, which reduces some of the uncertainty inherent in the forming stage. Relational uncertainty can also be diminished when group members have preexisting relationships or familiarity with each other. Although the decreased uncertainty may be beneficial at this stage, too much imposed structure from the outside can create resentment or a feeling of powerlessness among group members. So a manageable amount of uncertainty is actually a good thing for group cohesion and productivity.

Storming

During the storming stage of group development, conflict emerges as people begin to perform their various roles, have their ideas heard, and negotiate where they fit in the group's structure. The uncertainty present in the forming stage begins to give way as people occupy specific roles and the purpose, rules, and norms of a group become clearer. Conflict develops when some group members aren't satisfied with the role that they or others are playing or the decisions regarding the purpose or procedures of the group. For example, if a leader begins to emerge or is assigned during the forming stage, some members may feel that the leader is imposing his or her will on other members of the group. As we will learn in our section on group leadership, leaders should expect some degree of resentment from others who wanted to be the leader, have interpersonal conflicts with the leader, or just have general issues with being led.

Although the word storming and the concept of conflict have negative connotations, conflict can be positive and productive. Just like storms can replenish water supplies and make crops grow, storming can lead to group growth. While conflict is inevitable and should be experienced by every group, a group that gets stuck at the storming stage will likely not have much success in completing its task or achieving its purpose. Influences from outside the group can also affect the conflict in the storming stage. Interpersonal conflicts that predate the formation of the group may distract the group from the more productive idea- or task-oriented conflict that can be healthy for the group and increase the quality of ideas, decision making, and output.

Although we often have negative connotations of storming and conflict, the group conflict that happens in this stage is necessary and productive.

Norming

During the norming stage of group development, the practices and expectations of the group are solidified, which leads to more stability, productivity, and cohesion within the group. Group norms are behaviors that become routine but are not explicitly taught or stated. In short, group norms help set the tone for what group members ought to do and how they ought to

behave. Many implicit norms are derived from social norms that people follow in their everyday life. Norms within the group about politeness, lateness, and communication patterns are typically similar to those in other contexts. Sometimes a norm needs to be challenged because it is not working for the group, which could lead a group back to the storming stage. Other times, group members challenge norms for no good reason, which can lead to punishment for the group member or create conflict within the group.

At this stage, there is a growing consensus among group members as to the roles that each person will play, the way group interactions will typically play out, and the direction of the group. Leaders that began to emerge have typically gained the support of other group members, and group identity begins to solidify. The group may now be recognizable by those on the outside, as slogans, branding, or patterns of interaction become associated with the group. This stage of group development is key for the smooth operation of the group. Norms bring a sense of predictability and stability that can allow a group to move on to the performing stage of group development. Norms can also bring with them conformity pressures that can be positive or negative. In general, people go along with a certain amount of pressure to conform out of a drive to avoid being abnormal that is a natural part of our social interaction. Too much pressure, however, can lead people to feel isolated and can create a negative group climate. We will learn more about pressure as a group dynamic later in this chapter.

Explicit rules may also guide group interaction. Rules are explicitly stated guidelines for members and may refer to expected performance levels, output, attitudes, or dress codes. Rules may be communicated through verbal instructions, employee handbooks, membership policies, or codes of conduct. Groups can even use procedures like Robert's Rules of Order to manage the flow of conversations and decision-making procedures. Group members can contest or subvert group rules just as they can norms. Violations of group rules, however, typically result in more explicit punishments than do violations of norms.

Performing

During the performing stage of group development, group members work relatively smoothly toward the completion of a task or achievement of a

purpose. Although interactions in the performing stage are task focused, the relational aspects of group interaction provide an underlying support for the group members. Socialization outside of official group time can serve as a needed relief from the group's task. During task-related interactions, group members ideally begin to develop a synergy that results from the pooling of skills, ideas, experiences, and resources. Synergy is positive in that it can lead group members to exceed their expectations and perform better than they could individually. Glitches in the group's performance can lead the group back to previous stages of group development. Changes in membership, member roles, or norms can necessitate a revisiting of aspects of the forming, storming, or norming stages. One way to continue to build group cohesion during the performing stage is to set short-term attainable group goals. Accomplishing something, even if it's small, can boost group morale, which in turn boosts cohesion and productivity.

Adjourning

The adjourning stage of group development occurs when a group dissolves because it has completed its purpose or goal, membership is declining, and support for the group no longer exists, or it is dissolved because of some other internal or external cause. Some groups may live on indefinitely and not experience the adjourning stage. Other groups may experience so much conflict in the storming stage that they skip norming and performing and dissolve before they can complete their task. For groups with high social cohesion, adjourning may be a challenging emotional experience. However, group members may continue interpersonal relationships that formed even after the group dissolves. In reality, many bonds, even those that were very close, end up fading after the group disbands. This doesn't mean the relationship wasn't genuine; interpersonal relationships often form because of proximity and shared task interaction. Once that force is gone, it becomes difficult to maintain friendships, and many fade away. For groups that had negative experiences, the adjourning stage may be welcomed.

There must be some guided and purposeful reflection to make the most out of the adjourning stage. Many groups celebrate their accomplishments with a party or ceremony. Even groups that had negative experiences or failed to achieve their purpose can still learn something through reflection in the adjourning stage that may be beneficial for future group interactions. Often,

group members leave a group experience with new or more developed skills that can be usefully applied in future group or individual contexts. Even groups that are relational rather than task focused can increase members' interpersonal, listening, or empathetic skills or increase cultural knowledge and introduce new perspectives.

Group Norms

A new vice president came into an organization. At the end of her first weekly meeting with her staff members, she tossed a nerf ball to one of them and asked the person to say how she was feeling. When that person finished, the vice president asked her to toss the ball to someone else, and so on, until everyone had expressed himself or herself. This process soon became a regular feature of the group's meetings.

In our earlier section on group life cycles, you learned about the model of forming, storming, norming, and performing. Along with roles, status, and trust, which we'll encounter in the next chapter, norms are usually generated and adopted after a group's "forming" and "storming" stages.

As a group moves from "forming" toward "performing," then, norms help guide its members along the way. Whether we see them or not, norms are powerful predictors of a group's behavior.

What Norms Are

Group norms are rules or guidelines that reflect expectations of how group members should act and interact. They define what behaviors are acceptable or not; good or not; right or not; or appropriate or not. Norms may relate to how people look, behave, or communicate with each other. Tossing a nerf ball around a circle of workers is perhaps a peculiar way to start a meeting, and it probably doesn't contribute directly to achieving substantive goals. Still, it did represent a norm in the vice president's group we described—which, by the way, was a real group and not a product of imagination! Some norms relate to how a group as a whole will act—e.g., when and how often it will meet, for instance. Others have to do with the behavior of individual group members and the roles those members play within the group. By defining what social behavior lies within acceptable boundaries, norms can

help a group function smoothly and face conflict without falling apart. Thus, they can constitute a potent force to promote positive interaction among group members.

Origin of Norms

In a new group, norms may arise organically as members settle into their relationships and start to function together. Decisions need to be made and time needs to be taken for diverse activities such as identifying goals, determining tasks, and allocating human and tangible resources. Who will take the lead on these areas of the group's behavior has to be determined.

Further questions need to be answered as the group gets off the ground. Here are some examples:

- What topics are and are not appropriate for the group to discuss?
- How and to what degree will members respect and attend to each other's statements and viewpoints?
- How and when, if ever, will the group behave casually?
- What mechanisms will the group use to solve problems?

Any group eventually needs to deal with these questions, and the answers it reaches will become embodied as norms.

Implicit Norms

Whether a group is new or not, its norms aren't always expressed or discussed. People may simply assume that certain norms exist and accept them "by unspoken consent," in which case they are implicit norms.

Consider "same seat syndrome," for example. How often have you found that people in a college classroom seem to gravitate every day to exactly the same chairs they've always sat in? Nobody says, "Hey, I've decided that this will be my chair forever" or "I see that that's your territory, so I'll never sit there," do they?

Often norms are difficult for group members to express in words. What topics are okay or not okay to talk about during informal "chit-chat" may be a matter of unstated intuition rather than something that people can readily

describe. Nevertheless, implicit norms may be extremely powerful, and even large groups are apt to have at least some implicit norms.

The cultural background each member brings to a group may lie beneath conscious awareness, yet it may exert a powerful influence on both that person's and the group's behavior and expectations. Just as a fish is unaware that it lives in water, a person may easily go through life and participate in group interactions without perceiving that he or she is the product of a culture.

Explicit Norms

Sometimes group norms are stated outright, either orally or in writing; then they are explicit norms. Such explicit rules may be imposed by an authority figure such as an executive or designated team leader. They may be part of formal policies or regulations. Wearing a uniform or answering the telephone in a certain way, for instance, may be written requirements in a workplace group.
